

TDT4205 Compilers

Exercise 1

Stian Hvatum (hvatum)
MTDT

January 24, 2012

1 Task 1

Version info of *gcc*, *flex* and *bison*

- gcc (GCC) 4.2.3 (Ubuntu 4.2.3-2ubuntu7)
- flex 2.5.34
- bison (GNU Bison) 2.3

2 Task 2

A lexical analyzer is a program that accepts the source code of a program as a stream of characters, and identifying them as lexemes and outputs this as tokens.

An acceptor “accepts” the token stream generated by the lexical analyzer and decides if it satisfies the syntax of the programming language.

3 Task 3

3.1

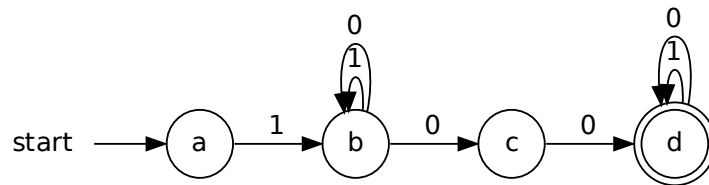

Figure 1: NDF for $1(0-1)^*00(0-1)^*$

3.2

This language includes blah blah blah

3.3

1	2	3
---	---	---

Figure 2: Transition table for $1(0-1)^*00(0-1)^*$
